

Muhammad Waseem Hanif

Associate Software Engineer — Full Stack Developer

✉ waseemhaniftechhub@gmail.com 📞 +92 323 1003993 💻 waseem3720 🌐 Waseem3720

Summary

Software Engineering graduate from FAST-NUCES with hands-on experience developing full-stack web applications using React.js, Node.js, Express.js, REST APIs, and databases. Skilled in designing scalable application architectures, integrating AI-powered features, and leading technical decisions for final year projects. Strong understanding of Object-Oriented Programming, SOLID principles, software design concepts, and clean coding practices. Proficient in using AI-assisted development tools including GitHub Copilot, Claude, and ChatGPT for code assistance, debugging, and improving development productivity, with ongoing exploration of Next.js, Machine Learning, and Deep Learning.

Education

National University of Computer and Emerging Sciences (FAST CFD Campus) 2022 – 2026
BS Software Engineering

Projects

CryTrack – AI Baby Cry Recognition System

AI-powered intelligent system for baby cry classification, healthcare assistance, and monitoring.

- Served as FYP Technical Lead, guiding overall system architecture, technology decisions, and development direction.
- Designed application workflow and guided integration between MERN stack, AI services, and database layers.
- Researched and guided selection of CNN-LSTM/CRNN model architecture for audio-based cry classification.
- Developed full-stack modules using React.js, Node.js, Express.js, and MongoDB with AI integration through Python/FastAPI.

FairGig – Gig Worker Analytics Platform

Microservices-based platform for income tracking, analytics, and anomaly detection.

- Developed backend APIs and application modules using React.js, Node.js, and PostgreSQL.
- Implemented data processing workflows and analytics features for monitoring user activities.

BloodLink – Smart Blood Donation System

Full-stack platform connecting blood donors with patients efficiently.

- Developed REST APIs, authentication workflows, database operations, and donor-patient matching features using Node.js, Express.js, and MongoDB.

Activities & Certifications

- Web Development Participant – SOFTEC FAST University
- JavaScript Certification – Cisco Networking Academy

Skills & Tools

Programming Languages: JavaScript, TypeScript, Python, PHP, C++, Java

Frontend Development: React.js, Next.js (Familiarity), HTML5, CSS3, Tailwind CSS

Backend Development: Node.js, Express.js, FastAPI, REST APIs

Databases: MongoDB, MySQL, PostgreSQL, Oracle

AI/ML: TensorFlow, Keras, Machine Learning, Deep Learning, AI Model Integration

Software Engineering: OOP, SOLID Principles, Data Structures & Algorithms, System Design

AI Development Tools: GitHub Copilot, Claude, ChatGPT

DevOps & Tools: Git, GitHub, Docker, Jenkins, CI/CD, AWS, Linux
